Get a rebate when you install a new heat pump

Heat pumps are among the most efficient and environmentally friendly heating and cooling systems on the market. They don't make heat—they move it.

Air-source heat pumps (ASHPs) can reduce your total heating costs by 30 percent to 60 percent. And you can receive a **rebate of \$250 per ton** on eligible ASHP units.

Cold-climate heat pumps (CCHPs) operate at 200 percent efficiency at 0° F—reducing the energy needed for heating by half. CCHPs on an energy-control rate qualify for a rebate of \$500 per ton (20-ton limit).

Geothermal heat pumps (GHPs) deliver more than four units of heat for each unit of energy used, which can reduce your annual heating and cooling costs by 70 percent. **Get a rebate of \$500 per ton** for open- or closed-loop GHPs that meet efficiency requirements.

Make the switch to LEDs

Lighting is an essential part of your home. Switching to energy-efficient light-emitting diode (LED) bulbs can make a big difference in your energy bills.

LEDs use 85 percent less energy and last about 25 times longer than incandescent bulbs.

Make the switch today!

Save with CoolSavings

Allow us to cycle your home air conditioning during occasional periods of high energy demand and you'll **save \$7 a month** on your bill from June to September. You'll stay cool and comfortable while assisting us in managing the electrical system during peak times.
