We offer rebates on
water heaters, thermal storage
systems, and heat pumps.

Install a grid-enabled water heater for the highest rebate.

Water heating

Tank-style electric water heaters are up to 96 percent efficient. Receive a \$150 to \$400 rebate on a qualified electric water heater when you install a new unit that's at least 90 percent efficient on an off-peak rate. Qualified commercial systems can receive a rebate of \$20 per kilowatt.

Thermal-storage systems are 100 percent efficient and work well with our discounted off-peak rates.

Thermal storage

Thermal-storage systems provide comfortable heating and are available in underfloor, room, or central furnace designs. Receive a rebate of \$40 per kilowatt for heating storage systems installed on a qualified off-peak rate.

Cold-climate heat pumps operate with 200 percent efficiency even at 0° F and meet up to 90 percent of space heating needs.

Heat pumps

We're offering more heat pump rebates than ever! Air-source heat pumps (ASHPs), cold-climate heat pumps (CCHPs), and geothermal heat pumps (GHPs) take advantage of free heat available in the air or ground.

In North Dakota, receive rebates up to \$500 per ton of heating capacity for CCHPs and GHPs served on an off-peak rate.

In South Dakota, receive rebates of \$250 per ton on ASHPs or \$500 per ton on CCHPs and GHPs that meet efficiency or off-peak requirements.
