

Make your business
more energy efficient
and save money.

otpc.com/RCx

Is your building operating as
efficiently as possible?

Recommissioning
program (RCx)

Whether large or small, your business can benefit from an RCx energy assessment

Commissioning is a process that ensures specific building systems perform interactively according to the design intent and the owner's operational needs.

Recommissioning ensures that a previously commissioned building is running at optimal performance.

Retrocommissioning identifies energy-saving adjustments in an existing facility that never was commissioned formally. It concentrates on equipment, lighting, and control and process systems.

RCx benefits

- A more comfortable facility
- More efficient operations
- Longer equipment service life
- Lower energy bills
- Credits for green-buildings programs such as Leadership in Energy and Environmental Design (LEED) and Green Globes and points for Energy Star certification
- A thorough building assessment by qualified engineering professionals

If you own or operate a facility in Minnesota, RCx can save you 5 percent to 15 percent on your energy bills. And upgrades typically pay for themselves in energy savings alone within an average of less than two years.

We offer our standard RCx option, RCx Lite for smaller facilities, and Turnkey RCx for savings that begin right away.

Rebates are available

If your project is preapproved, you're eligible for a rebate of 30 percent to 100 percent for the study cost depending on study type. Be sure to contact us before you contract with an RCx study provider.
