Electric water heaters are safe and efficient

Electric is best

Meet your hot water needs, waste almost no energy, and get up to \$400 in rebates when you install a high-efficiency electric water heater on an off-peak service.

Electric water heaters are safe, efficient, and affordable.

Safety	Efficiency	Save with off-peak rates
		
No need to worry about combustion, pilot lights, gas leaks, fuel lines, or flue gases such as carbon monoxide because electric water heaters don't burn fossil fuel.	Standard electric water heaters are up to 96 percent efficient, so nearly all energy goes directly to heating your water.	Add an electric water heater to one of our off-peak rates, which are 25 to 50 percent less than our standard prices. Or, receive a monthly bill credit that's available with a simplified installation. You'll save!

Electric water heater rebates vary by unit size with higher rebates available for new controlled service installations.

- Receive **\$200 to \$400** on grid-enabled 80-gallon or larger units.
- Receive **\$150 to \$300** on qualifying standard 80-gallon units.
- Receive **\$150** on a 50-gallon to 79-gallon electric unit on new controlled service installations.
