

**Rebates available for heat storage systems**

**HIGHER**

Install a heat storage system on a qualified off-peak rate and receive a rebate of **\$50 per kilowatt**. That's about \$1,500 for a typical home!

For more information call our Idea Center at **800-493-3299** or visit [otpc.com/HeatStorage](https://otpc.com/HeatStorage).

# Clean, quiet, and versatile

Heating storage systems generate and store heat in sand or ceramic bricks and release that heat as needed. They're a perfect match for our qualified rates, which are 30 to 60 percent less than our standard electricity prices.

**Ask us  
how you  
can save!**

## Choose from several options

### Room units

These heat-storage units are ideal for retrofitting homes without ductwork, heating a new addition, or warming a chilly spot.

### Central storage furnace

A central storage furnace provides whole-house heating through a duct system.

### Underfloor heat storage

Electric cables, panels, or hydronic tubing are buried in a bed of sand during construction. Heat stored in sand radiates clean, quiet, even heat.

**Ask your HVAC contractor to help you plan your off-peak heat-storage system installation to qualify for a \$50 per kilowatt rebate.**
