

Install a CHP and take advantage of generous rebates. Call 800-493-3299 or visit otpc.com/CHP to learn more.

Let us help you save!

Rebates range from \$500 to \$900 per ton

Cold-climate heat pumps provide comfort for all seasons

Designed for our weather, cold-climate heat pumps (CCHPs) operate with 200 percent efficiency at 0°F and up to 400 percent efficiency in warmer temps. A CCHP can provide up to 90 percent of your heating needs. And they provide efficient summer-time cooling.

We offer **generous rebates** through our energy efficiency and energy control programs.

Install a *ductless* CCHP

Get \$500 per ton when rated with a 10+ HSPF* **and** served on a qualified off-peak rate.

Get \$700 per ton when rated with a 10+ HSPF **and** labeled ENERGY STAR® **or** rated 15+ SEER*.

Install a *ducted* CCHP

Get \$700 per ton when rated with a 9+ HSPF **and** served on a qualified off-peak rate.

Get \$900 per ton when rated with a 9+ HSPF **and** labeled ENERGY STAR® **or** rated 15+ SEER.

Special rules apply for Minnesota homes heated with natural gas.

*Terms: HSPF: heating season performance factor; SEER: seasonal energy efficiency rating

What makes a CCHP efficient? Variable-speed inverter technology!

- Alters compressor speeds, reducing energy consumption and operating costs.
- Reaches desired temperatures faster.
- Maintains temperatures for steady comfort.
- Operates with less noise.

A variable speed inverter efficiently smooths out temperatures to keep you comfortable.
