

Install a CHP and take advantage of generous rebates. Call 800-493-3299 or visit [otpc.com/CHP](http://otpc.com/CHP) to learn more.

Let us help you save!

Rebates range from \$500 to \$700 per ton

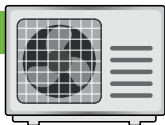

# Cold-climate heat pumps provide comfort for all seasons

Designed for our weather, cold-climate heat pumps (CCHPs) operate with 200 percent efficiency at 0°F and up to 400 percent efficiency in warmer temps. A CCHP can provide up to 90 percent of your heating needs. And they provide efficient summer-time cooling.

We offer **generous rebates** when you stall your CCHP on our Dual Fuel, Deferred Load, or RDC Rate.

## Install a *ductless* CCHP

Get **\$500 per ton** when rated with a 10+ HSPF\* **and** served on a qualified off-peak rate.

## Install a *ducted* CCHP

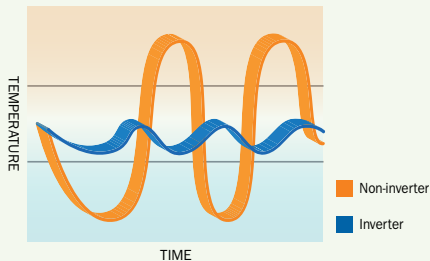

Get **\$700 per ton** when rated with a 9+ HSPF **and** served on a qualified off-peak rate.

\*HSPF: heating season performance factor

## What makes a CCHP efficient? Variable-speed inverter technology!

- Alters compressor speeds, reducing energy consumption and operating costs.
- Reaches desired temperatures faster.
- Maintains temperatures for steady comfort.
- Operates with less noise.

*A variable speed inverter efficiently smooths out temperatures to keep you comfortable.*
