## Smart thermostat

Choose a smart thermostat with geofencing capabilities to ramp up your savings.

# How it works

A smart thermostat with geofencing capabilities is ideal for people who have changing schedules and little time to monitor and update a manual programmable thermostat.

Geofencing works with your smart phone's location to recognize if you're home or away, and signals to your smart thermostat to automatically adjust temperatures. It saves energy and money while you're away and plans for optimal comfort when you arrive home!

---

*A smart thermostat can help you save an estimated 10 percent a year on heating and cooling costs.*
