

Get the Advantage

Programs for home or business to put money in your pocket.

Heat pumps

Efficient and environmentally friendly!

Air-source heat pumps (ASHPs), cold-climate heat pumps (CCHPs), and geothermal heat pumps (GHPs) take advantage of free heat available in the air or ground.

Install a qualified heat pump system on our Dual Fuel, Deferred Load, or Residential Demand Control (RDC) Rate to receive a rebate.

Air-source heat pump - Get a \$250 per ton rebate when installed on a qualified off-peak rate and the system includes supplemental electric heat. Supplemental electric heating may be a newly installed 9 kilowatt (kW) or greater system, or an existing, actively-used system. Active use is determined by reviewing the past winter off-peak electric metered use during December and January to verify an average of 1,400 kilowatt-hours (kWh) per month.

Cold-climate heat pump - Designed for our weather, cold-climate heat pumps operate with 200 percent efficiency at 0°F and up to 400 percent efficiency in warmer temps. A CCHP can provide up to 90 percent of your heating needs.

Install a ductless CCHP with a 10+ HSPF* and get a **\$500 per ton rebate**.

Install a ducted CCHP with a 9+ HSPF and get a **\$700 per ton rebate**.

Installing a CCHP adds little to no additional cost over a standard central air conditioner when you take advantage of our rebates.

*HSPF: heating season performance factor. Supplemental heating not required for CCHP rebate.

Geothermal heat pump - The most efficient and environmentally friendly option available. Install one on an off-peak rate and get a **\$700 per ton rebate - and qualify for Federal tax credits too!**

Note: Rebates totaling more than \$10,000 require prior approval and evaluation.

Electric heating

Safe, comfortable, and efficient electric heating.

Install a 9kW to 25kW electric plenum heater, boiler, or furnace on our Dual Fuel or RDC Rate and receive **\$500 per unit**. **Get a \$20 per kW rebate** on larger units.

Note: Rebates totaling more than \$10,000 require prior approval and evaluation.

A plenum heater sits within your duct work just above your furnace to create a dual fuel system.

An electric boiler heats liquid for radiator, baseboard, and hydronic floor heating systems.

An electric furnace is a whole-house system.

Heat storage systems

Comfort and savings with off-peak heating.

Get a rebate of **\$40 per kW** on a 100 percent efficient thermal storage underfloor, central furnace, or room unit system installed on our **Deferred Load, Fixed Time of Delivery, or RDC Rate**. That's about \$1,200 for a typical home.

Note: A maximum of 500kW may qualify. Rebates totaling more than \$10,000 require prior approval and evaluation.

Water heating

Save while you work, play, or sleep.

Electric water heaters operate at up to 96 percent efficiency. And when you operate yours on one of our off-peak programs, you'll save even more with electric price discounts or an \$8 a month bill credit.

Install a tank-styled unit with a uniform energy factor (UEF) of .90 or higher on an off-peak rate and receive a **\$150 to \$300 rebate**. Qualified commercial systems can receive a rebate of **\$20 per kW** when at least 12kW is installed with a minimum of 120 gallons of storage capacity. Maximum rebate of \$5,000.

Electric vehicle charging

Choosing to drive electric? Charge with off-peak electricity.

Customers installing a Level 2 electric vehicle charging station on a qualified rate may receive a \$400 rebate. Eligible rates include our Dual Fuel, Deferred Load, Fixed Time of Delivery, and RDC Rates.

Home Energy Analyzer

Make your own plan to reduce energy use.

For residential customers, our Home Energy Analyzer tool helps create personalized plans to reduce energy use. Use it to view:

- **Energy Insights.** The factors that cause your bills to vary.
- **My Bills and My Usage.** See where your energy is used.
- **My Savings.** Create a personal savings goal and a plan to reach that goal.

**In 2020 each user
saved an average**

225 kilowatt-hours*

*Based on 2020 data for Minnesota customers.

ePay

Smart, easy, and secure.

Use ePay, the fast and secure way to manage payments, to save time and organize your account management chores. It's:

- Mobile friendly.
- Flexible—offering autopay, pay-by-text, and monthly scheduled payment options.
- Easy to use and eliminates postage.
- Always available.

Register your account and
log in at **otpc.com!**

You'll find the Home Energy Analyzer
and ePay programs on your
My Account page.

Let us help you save!

Reach out and ask questions *before* starting your next project. Together, we'll walk through your options. We'll give you information to talk about with your contractor or tips if you're a DIYer.
