

# Notice of Annual Energy Adjustment True-up

The Energy Adjustment line item on your monthly electric bill is the forecasted Energy Adjustment. We calculate the forecasted Energy Adjustment by adding the forecasted cost of fuel, including transportation, and forecasted energy purchases to supplement our own power plants and subtract forecasted fuel-related costs recovered through sales. These energy costs are passed through to customers without a markup, so we don't profit from them.

Once a year, we compare actual to forecasted costs for the prior calendar year and compute a rate that trues-up the difference.

As approved in the MN Public Utilities Commission's June 30, 2021, Order in Docket No. E017/AA-19-297, the January 1 through December 31, 2020, over-collection will be a four-month credit of (\$.0014) per kilowatt-hour. This credit will be a part of the monthly energy adjustment on customer bills from September 1, 2021, through December 31, 2021.
