Prepare for comfort this winter season

Check out these tips to reduce energy and save money

Weatherstrip and caulk around windows, door frames, and where baseboards meet walls to stop drafts and heat loss.

Add insulation to your attic to reduce energy loss through your roof—one of the most significant areas for heat loss in most homes.

Replace worn or ripped door sweeps, including those on doors in attached garages. Sweeps block drafts from reaching inside your home!

Limit the use of exhaust fans. They draw out heated air. It's okay to let shower steam make its way through your home. It adds moisture to dry winter air!

Replace the ten most-used incandescent bulbs in your home with LEDs to save about \$55 per year.

During holiday get-togethers, store drinks in a cooler. You'll free up space and save when you avoid opening the fridge door unnecessarily.

Use glass or ceramic bakeware. They distribute heat more evenly, leading to a quicker cook. And you can decrease your oven setting by 25 degrees to get the same result.

Stay comfortable with your thermostat set at a lower temperature by wearing your slippers and a cozy sweater. For each degree you lower the temperature, you'll save about three percent on heating costs for the period the setting is dropped.
