Learn more about our Dual Fuel Rate, rebates, and electric technology options.

In addition to plenum heaters, we also offer rebates for electric boilers, electric furnaces, and more when installed as part of an off-peak system.

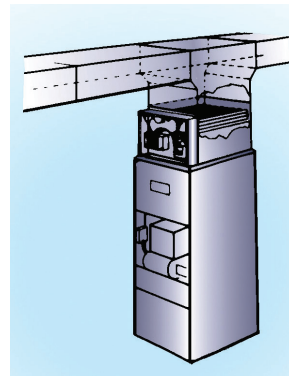

Had enough with expensive fuel prices?

Install an electric plenum heater on an off-peak rate to lower your costs.

Reduce monthly heating bills by nearly 40 percent with a plenum heater

Your propane heater has served you well over the years. Extend its life and reduce your costs by installing an electric plenum heater on our Dual Fuel Rate. With a dual fuel system and our rebate, you can take control of high and volatile propane prices.

A plenum heater is an electric-resistance heating device that's installed in the open space where your ductwork and furnace join.

See how much you can save

Andrea has a 2,000-square-foot home and uses a propane furnace for heating. Using a sizing guideline of 8 to 10 watts per square foot, Andrea decides to install a 20-kilowatt plenum heater.

PLENUM HEATER

Plenum heater including installation	\$2,000 ¹
Rebate	\$500
Total cost	\$1,500

ANNUAL ENERGY COSTS

90% efficient propane furnace	\$1,657.32 ²
Plenum heater on Dual Fuel Rate	\$1,029.73 ³
Annual savings	\$627.59
Estimated payback	3 years

1. May require electric service and wiring upgrades.
2. Based on a propane price of \$2.605 per gallon (EIA.gov MN March 2022).
3. Based on 6.247 cents/kilowatt-hour on our Small Dual Fuel Rate with all riders and other charges. Includes 10 percent of required energy supplied by propane during energy control events.
