Electric heating
Safe. Comfortable. Efficient.

Save with electric heating rebates

Electric heating provides clean, efficient, and economical warmth. Our discounted off-peak rates are up to 50 percent less than standard prices. And rebates are available when a minimum of 9 kilowatts (kW) is installed on our **Dual Fuel** or **Residential Demand Control (RDC) Rate**.

Receive a **\$40-per-kW rebate** when you install any of the following:

A plenum heater sits within your duct work just above your furnace to create a dual fuel system.

An electric boiler heats liquid for a radiator, baseboard, or hydronic floor heating system.

An electric furnace is a whole-house system.

Rebates are also available for:

- **Electric cable or panel storage heating**, which is installed under the slab during new construction.
- **Supplemental heating**, such as baseboard heat, cove heat, a garage unit heater, radiant ceiling heat, or nonstorage floor-warming heat installed beneath flooring material.
- **A heat pump** installed on a qualified off-peak rate.

Rebates vary.

Rebates and tax credits help make upgrading your system affordable!
