Add comfort where it counts!

Insulate and seal air leaks to receive rebates.

Improve your home's comfort and reduce heating and cooling costs

Poorly insulated and sealed walls, roofs, and floors can account for 15% or more of home heating and cooling energy loss. Improving insulation and sealing air leaks are some of the most cost-effective energy-saving improvements you can make to your home!

If you heat with electricity, you may qualify for up to **\$2,800 in rebates.**

We'll pay:

- Up to **\$1,000 for attic insulation** improvements.
- Up to **\$1,000 for wall insulation** upgrades.
- Up to **\$800 for air sealing** and weather stripping.

Work with a contractor to meet our R-value requirements to qualify.
(Note: New construction homes aren't eligible for these rebates.)

Federal tax credits also are available. Up to \$1,200 is available each year through federal tax credits for home energy improvements. Consult your tax preparer before making a purchase.
